MSL Four Roller Clutch Conversion

This converts the two roller clutch reel to a four roller clutch as used in the MSL series. It increases the drag range with more pressure at the high end and doubles the operational function of the clutch. The reel is less sensitive to environmental conditions, shock load and maintenance. Conversion includes new spindle, complete drag disc, clutch, spool polymer, bearings and complete update service to current MSL spec.

We offer this conversion upgrade at our net parts cost of \$35 per reel and \$5 per extra spool including ground return shipping to the lower 48 states. This is a recommended upgrade for early model 6 wt. and larger reels. The service shop time is one to three days.

Return the complete reel and any spare spools (you may leave the line on) and mail to 585 Clover Lane Suite 1, Ashland, OR 97520. We suggest you insure your shipment.

Please include a note, contact phone number and return UPS return shipping address (indicate if you want a delivery signature). You may include a check or call in a Visa/MC credit card.
